Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/8/07 has been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 1/8/07 is acknowledged and considered by the examiner.

Allowable Subject Matter

3. The indicated allowability of claims 12, 13, 16-18 is withdrawn in view of the newly submitted reference(s) to Baumgartner (5,702,454). Rejections based on the reference(s) follow.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3731

5. Claims 12, 13 and 18 is rejected under 35 U.S.C. 102(b) as being anticipated by Baumgartner (5,702,454). Baumgartner disclose a method of replacement for a part of an intervertebral disk including the steps of inserting a flexible device into a defect (5) in the annulus fibrosis, the flexible device having a structure with at least two appendages (18) made from a shape-memory material or elastically deformable expansion material, advancing the flexible device distally beyond the outer layer in the annulus fibrosis (col. 5, lines 11-21), expanding the appendages of the flexible device by allowing the device to spring back shape substantially larger than the defect in the outer layer of the annulus fibrosis (col. 5, lines 15-17).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baumgartner (5,702,454) in view of Bao et al (5,192,326). Baumgartner disclose all the limitations of the claims except for a presence of hydrogel. Bao et al. disclose that hydrogel can be used to form a better support member and hydrogel has good mechanical strength and can be adapted to form any shape to fit the cavity and a relatively compact (cols. 11-16). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to make the support members from hydrogel material in order to reduce the incision area on the annulus.
